

Ensuring Quality Geosynthetics Installations 3 Day Course

This 3 day course covers all stages of ensuring a quality geomembrane installation.

Topics

- Roles & Responsibilities
- Systems & Protocols that yield consistent quality
- Keys to Success
- Tricks of the Trade
- Management Processes
- Insightful Real Life Lessons
- Documentation
- Safety

Highlights

- Interactive sessions
- Real life Project Samples: Failures & Successes
- Coursework covers material for all experience levels

The course has allocated substantial Q&A session time. It is vitally important that participants are able to understand how the class relates to their specific role and it's challenges.

"This is the kind of publication this industry has needed for many years. Concise, real-world information that helps everyone on the site. It should be required reading for almost everyone involved in a liner installation project."

"Demo" Dave McLaury
President, COO
Demtech
